

AUTOMATED HISTOPATHOLOGY DIAGNOSTIC REPORT

Patient ID:	PAT-89210	Report Date:	2026-08-27
Biopsy Site:	Breast Tissue / Lymph Node	Magnification Scale:	20x (0.5 um/px)
Stain Type:	H&E (Hematoxylin & Eosin)	Pipeline Model:	PyTorch U-Net / ONNX Engine

1. Microscopic Slide & Tumor Segmentation Overlay

2. Quantitative Tissue Metrics & Severity Grading

Diagnostic Parameter	Measured Value
Total Tissue Surface Area	0.1011 mm²
Segmented Tumor Area	0.0075 mm² (7521.5 µm²)
Tumor Burden Ratio (%)	7.44 %
Histological Severity Grade	Grade I - Well-differentiated / Low Severity
Assessed Risk Category	Low Risk

3. Pathologist Impression & Clinical Protocol

The automated computer vision pipeline identified region(s) consistent with malignant tumor tissue comprising **7.44%** of the biopsy field. Classification indicates **Grade I (Well-differentiated / Low Severity)**. Clinical recommendation: *Follow-up surveillance routine; regular monitoring recommended.*
